

Deccan Education Society's

**Kirti M. Doongursee College of  
Arts, Science and Commerce  
(AUTONOMOUS)**

Affiliated to

**UNIVERSITY OF MUMBAI**

Syllabus for  
Program: Masters of Science  
Course: First Year  
Subject: Data Science

Choice Based Credit System (CBCS)  
with effect from  
Academic Year 2023-2024

## **PROGRAM OUTCOMES**

| <b>PO</b> | <b>Description</b>  |
|-----------|---|
|           | On completion of M.Sc. Data Science programme, students will be able:   |
| PO1       | To become a skilled Data Scientist in industry, academia, or government.  |
| PO2       | To use specialized software tools for data storage, analysis and visualization.   |
| PO3       | To independently carry out research/investigation to solve practical problems.  |
| PO4       | To gain problem-solving ability- to assess social issues (ethical, financial, management, analytical and scientific analysis) and engineering problems. |
| PO5       | To have a clear understanding of professional and ethical responsibility.   |
| PO6       | To collaborate virtually.   |
| PO7       | To have critical thinking and innovative skills.  |
| PO8       | To translate vast data into abstract concepts and to understand database reasoning.   |

**Deccan Education Society's  
Kirti M. Doongursee College  
(Autonomous) Proposed**

**Curriculum as per NEP-2020**

**Year of implementation- 2023-2024**

**Name of the Department-Data Science**

| <b>K23PSDSMJ112</b> | <b>Paper II</b>   | <b>4</b>       | <b>4</b>              |

**Course Outcomes:**

After successful completion of this course, students would be able to

- Identify different types of data and their appropriate statistical measures.
- Understand the basic knowledge on data collection and various statistical elementary tools.
- Apply the theoretical discrete probability distributions like binomial, Poisson, etc., in the relevant application areas.
- Analyze problems and to make better decisions for the future in their fields.

| Unit | Topics  | No of Lectures |
|------|---|----------------|
| I    | <p><b>Introduction to Applied Statistics:</b> The Nature of Statistics and Inference, What is “Big Data”?, Statistical Modelling, Statistical Significance Testing and Error Rates, Simple Example of Inference Using a Coin, Statistics Is for Messy Situations, Type I versus Type II Errors, Point Estimates and Confidence Intervals, Variable Types, Sample Size, Statistical Power, and Statistical Significance, The Verdict on Significance Testing, Training versus Test Data.</p>   | 15             |
| II   | <p><b>Computational Statistics:</b> Vectors and Matrices, The Inverse of a Matrix, Eigenvalues and Eigenvectors</p> <p><b>Means, Correlations, Counts: Drawing Inferences:</b> Computing z and Related Scores, Statistical Tests, Plotting Normal Distributions, Correlation Coefficients, Evaluating Pearson’s r for Statistical Significance, Spearman’s Rho: A Nonparametric Alternative to Pearson, Tests of Mean Differences, t-Tests for One Sample, Two Sample t-Test, Paired-Samples t-Test, Categorical Data, Binomial Test, Categorical Data Having More Than Two Possibilities.</p>  | 15             |
| III  | <p><b>Power Analysis and Sample Size Estimation:</b> Power for t-Tests, Power for One-Way ANOVA, Power for Correlations.</p> <p><b>Analysis of Variance:</b> Fixed Effects, Random Effects, Mixed Models, Introducing the Analysis of Variance (ANOVA), Performing the ANOVA, Random Effects ANOVA and Mixed Models, One-Way Random Effects ANOVA, Simple and Multiple Linear Regression, Simple Linear Regression, Multiple Regression Analysis, Hierarchical Regression, How Forward Regression Works.</p> <p><b>Logistic Regression and the Generalized Linear Model:</b> Logistic Regression, Logistic Regression, Predicting</p> | 15             |

|  |  |           |
|--|--|-----------|
|  | Probabilities, Multiple Logistic Regression, Training Error Rate Versus Test Error Rate.   |           |
| <b>IV</b>  | <p><b>Multivariate Analysis of Variance (MANOVA) and Discriminant Analysis:</b> Multivariate Tests of Significance, Example of MANOVA, Outliers, Homogeneity of Covariance Matrices, Linear Discriminant Function Analysis, Theory of Discriminant Analysis, Predicting Group Membership, Visualizing Separation</p> <p><b>Principal Component Analysis:</b> Principal Component Analysis Versus Factor Analysis, Properties of Principal Components, Component Scores, How Many Components to Keep?, Exploratory Factor Analysis, Common Factor Analysis Model, Factor Analysis Versus Principal Component Analysis on the Same, Initial Eigenvalues in Factor Analysis, Rotation in Exploratory Factor Analysis, Estimation in Factor Analysis</p> <p><b>Cluster Analysis:</b> k-Means Cluster Analysis, Minimizing Criteria, Example of k-Means Clustering, Hierarchical Cluster Analysis, Why Clustering Is Inherently Subjective, Nonparametric Tests, Mann-Whitney U Test, Kruskal-Wallis Test, Nonparametric Test for Paired Comparisons and Repeated</p> | <b>15</b> |
| <p><b>Textbooks:</b></p> <ul style="list-style-type: none"> <li>• Univariate, Bivariate, and Multivariate Statistics Using R Daniel J. Denis Wiley 1st 2020</li> <li>• Practical Data Science Andreas François Vermeulen A Press 1st 2018</li> <li>• Data Science from Scratch first Principle in python Joel Grus Shroff Publishers 1st 2017</li> </ul> <p>Additional References:</p> <ul style="list-style-type: none"> <li>• Experimental Design in Data science with Least Resources N C Das Shroff Publishers 1st 2018</li> </ul> |  |           |

| <b>Course Code</b>  | <b>Statistical Methods for Data Science Practical</b> | <b>Credits</b>   | <b>Lectures/Week</b> |
|---------------------|---|------------------|----------------------|
| <b>K23PSDSMJP12</b> | <b>Paper II</b>                                       | <b>2 credits</b> | <b>4 lectures</b>    |

**Course Outcome: -**

- Describe basics of mathematical foundation that will help the learner to understand the concepts of Deep Learning.
- Understand and describe model of deep learning
- Design and implement various deep supervised learning architectures for text & image data.
- Analyze and implement various deep learning models and architectures.
- Apply various deep learning techniques to design efficient algorithms for real-world applications.

**Perform minimum ten practical based on the basic concepts of each programming paradigm covering the entire syllabus.**

| Course Code  | ELECTIVES SEM – I – Programming Paradigms   | Credits        | Lectures /Week |
|--|---|----------------|----------------|
| K23PSDSE121  | Paper I   | 4              | 4              |
| <p><b>Course Outcomes:</b></p> <p>After successful completion of this course, students would be able to</p> <ul style="list-style-type: none"> <li>• To develop the programming ability of the student.</li> <li>• Basic concepts to be cleared from different programming paradigms..</li> <li>• To learn Different approach towards the programming problem.</li> <li>• To handle the errors and find suitable solutions which can be applied for the business.</li> </ul> |   |                |                |
| Unit   | Topics  | No of Lectures |                |
| I  | Foundations-Language design, why to study programming language, compilation and interpretation, programming environments. Programming language syntax – Specifying syntax: regular expressions and Context-Free grammar (Token and Regular expressions, Context Free grammar, Derivations and parse trees), Scanning (Generating Finite automation, Scanner code, Table-driven scanning, Lexical errors, pragmas), Parsing (Recursive Descent, Writing L1 grammar, Table driven top down parsing, Bottom up parsing, Syntax errors) | 15             |                |
| II   | <p><b>OBJECT ORIENTATION</b></p> <p>Basic concepts: objects, classes, methods, overloading methods, messages inheritance: overriding methods, single inheritance, multiple inheritance Interfaces, encapsulation, polymorphism.</p> <p><b>FUNCTIONAL PROGRAMMING</b></p> <p>Definition of a function: domain and range, total and partial functions, strict functions. Recursion, Referential transparency, Side effects of functions</p>   | 15             |                |
| III  | <p><b>LOGIC PROGRAMMING</b></p> <p>Basic constructs, Facts: queries, existential queries, conjunctive queries and rules. Definition and semantics of a logic program, Recursive programming: Computational model of logic programming, Goal reduction, Negation in logic programming</p>  | 15             |                |
| IV   | <p><b>SCRIPTING LANGUAGE</b></p> <p>What is scripting language, Problem domain (Shell languages, Text processing and report generation, Mathematics and statistics, General purpose scripting, Extension languages),</p>  | 15             |                |

|  |   |  |
|--|---|--|
|  | Scripting the world wide web (CGI scripts, Embedded server side script, client side script, Java Applets, XSLT) |  |
|--|---|--|

- Identify and describe soft computing techniques and their roles in building intelligent machines
- Recognize the feasibility of applying a soft computing methodology for a particular problem
- Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems and also Apply neural networks for classification and regression problems
- Apply genetic algorithms to combinatorial optimization problems
- Evaluate and compare solutions by various soft computing approaches for a given problem.

Perform minimum ten practical based on the basic concepts of each programming paradigm covering the entire syllabus.

**Course Outcomes:**

After successful completion of this course, students would be able to

- Recognize the key algorithmic concepts used in data science.
- Explain the principles and techniques of algorithm design and analysis.
- Apply various regression methods to solve data manipulation and optimization problems.
- Analyze the efficiency and scalability of algorithms for different problem sizes.

| Unit | Topics  | No of Lectures |

- To understand the system, submit the proposal and implement the same in the semester-II.
- To propose project implementation as part of the semester-II.
- Experimental setup, analysis of results, comparison with results of related works, conclusion, and prospects will be part of the project implementation.
- To make a project implementation report and appear for a project viva

### **PROJECT IMPLEMENTATION**

Students need to spend around 133 hours for the project implementation, which fetches 4 credits.

#### **Guidelines for Project Implementation in Semester - II**

- A student is expected to devote at least 3 to 4 months of effort to the implementation.
- Students should submit a detailed project implementation report at the time of viva.

#### **Guidelines for Documentation of Project Proposal in Semester -II**

A student should submit a project implementation report with the following details:

- Title: Title of the project.
- Objective: A detailed objective of the proposal is needed.
- Related works: A detailed survey of the relevant works done by others in the domain. The student is expected to refer to at least 15 recent (last five years) research papers in addition to textbooks and web links in the relevant topic.
- Methodology: A proper and detailed procedure of how to solve the problem discussed. It shall contain the techniques, tools, software, and data to be used.
- Implementation details: A description of how the project has been implemented.
- Experimental setup and results: A detailed explanation of how experiments were conducted, what software was used, and the results obtained. Details like screenshots, tables, and graphs can come here.
- Analysis of the results: A description of what the results mean and how they have been arrived at. Different performing measures or statistical tools used etc may be part of this.
- Conclusion: A conclusion of the project performed in terms of its outcome
- Future enhancement: A small description of what enhancement can be done when more time and resources are available
- Program code: The program code may be given as an appendix.

The project documentation needs to be signed by the teacher in charge and head of the Department. Students should also attach the certified copy of the internal evaluation report (Appendix III) at the time of Project evaluation and viva as part of the University examination.

## **Evaluation Scheme for First Year (PG) under NEP (4 credits)**

### **I. Internal Evaluation for Theory Courses – 40 Marks**

**1) Continuous Internal Assessment(CIA) Assignment** - Tutorial/ Case Study/ Project / Presentations/ Group Discussion / Ind. Visit. – 20 marks

**2) Continuous Internal Assessment(CIA) ONLINE Unit Test** – 20 marks

### **II. External Examination for Theory Courses – 60 Marks**

Duration: 2 Hours

Theory question paper pattern:

| <b>Question</b> | <b>Based on</b> | <b>Marks</b> |
|-----------------|-----------------|--------------|
| Q.1             | Unit I          | 15           |
| Q.2             | Unit II         | 15           |
| Q.3             | Unit III        | 15           |
| Q.4             | Unit IV         | 15           |

- All questions shall be compulsory with internal choice within the questions.
- Each Question may be subdivided into sub questions as a, b, c, d, etc. & the allocation of Marks depends on the weightage of the topic.

### **III. Practical Examination**

- Each core subject carries 50 Marks
- Duration: 3 Hours for each practical course.
- Minimum 80% practical from each core subjects are required to be completed.
- Certified Journal is compulsory for appearing at the time of Practical Exam

**NOTE: To pass the examination, attendance is compulsory in both Internal & External (Theory + Practical) Examinations.**
